Comprehension Questions: Spring

1. When does spring begin?

2. What happens to the weather in spring?

3. What animals can you see in spring?

4. Why do you think hibernating animals wake up in spring?

Spring

We have four seasons: winter, spring, summer and fall. Spring begins every year on March 21st or 22nd. When spring comes, the weather begins to get warmer and the sun shines longer every day. Many animals, like birds, sheep and cows, have babies in the spring. In the spring, the grass begins to grow, and buds form on trees and flowers. Many animals that hibernate in the winter wake up in the spring. You can see frogs, squirrels and chipmunks in the spring. Many birds come out in spring too. Spring is over in June, when it becomes summer!
